Storm Doors

Design and Strength

Beautiful. Functional. Durable.

If you could design the perfect storm door, you would start with those three requirements. Then, you would add classic styling, use the best materials, build in long-lasting quality features, and provide the most advanced finish. In short, you would create a Weather King Storm Door.

- **Our fully welded corners** become the strongest points overall, giving your door strength and durability.
- **Our Hinge System** uses an exclusive, four-hinge, tubular design that interlocks into the door frame. Heavy steel pins hold bronze bushings in place for extra durability. Our hinge system is guaranteed not to fail or sag.
- **The Brush-Type, Adjustable-Bottom Weather Seal** is similar to weather seals readily found on many commercial doors.
- **Safety Glass.** All storm doors – even custom sizes – feature tempered safety glass. Your family's safety is our concern.
- **Our Double Door** utilizes an engineered self-contained astragal system specifically designed for pair installation.

- **Heavy Aluminum Screens.** Our frames are made of extruded aluminum – twice as heavy as conventional frames. In addition, our frames feature solid aluminum corners and are fitted with non-glare screening for extra strength and rigidity.
- **Dependable Hardware.** We use an adjustable hydraulic closer for smooth, non-jarring closing action. We also feature a fold-back wind strap. Our locks are selected for their durability and quality. And, all of our doors have a security deadbolt feature for your protection.

Color

Weather King offers a rich palette of colors to complement your decorating scheme. Our powder-coating system is one of the most advanced in the U.S. today. Whether you choose a classic color or a new designer shade, you will enjoy years of durable beauty.

Select from our assortment of models and colors. Complete your work of art with our special hardware and trim options. Whether traditional, contemporary, elegant, or informal, we have the style and color that is right for you.

Self-Storing Doors

Discover the convenience of self-storing doors. Our popular self-storing models allow you to change ventilation by sliding the glass insert for seasonal conditions. Simply choose the top or bottom ventilation position. As the seasons change, you can change from glass to screen – no need for removal or storage of panels.

Finishing Touches

Handles

Your new door comes complete with a durable, lockable handle. You may, however, want to customize your new door with upgraded hardware. Review our selection and choose the style and finish that best harmonizes with your new look.

Deluxe Pull Levers - Standard with Imperial Doors. Offered in Satin Nickel, Oil-Rubbed Bronze, and Polished Brass Plate, with matching Interior Paddle Handles

Pushbutton Handles - Standard With Regal Doors. Offered in Brass, Satin Nickel, and Black

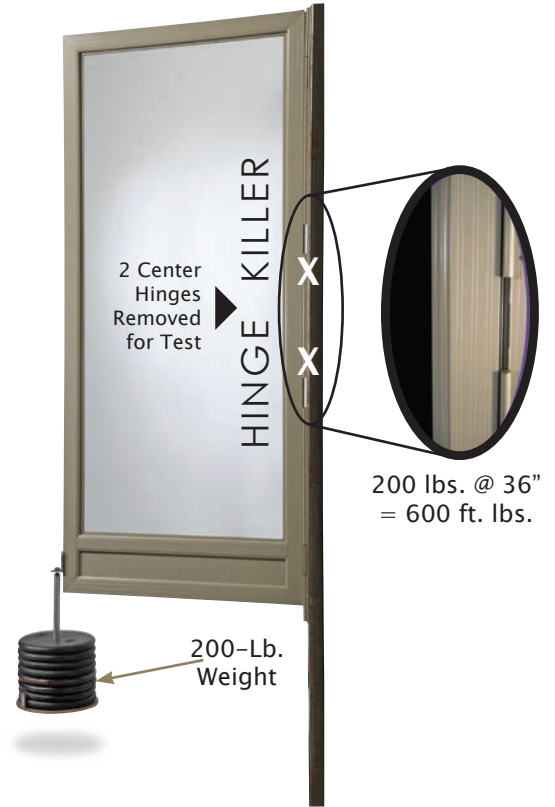

Mortice Handles - offered in Solid Brass, Satin Nickel, and Oil-Rubbed Bronze

Trigger Pulls - offered in Satin Nickel, Oil-Rubbed Bronze, and Polished Brass Plate

Hinge Test

Here's A Fun Fact About The Hinges:

They were tested with 200lbs of weight from the test door at 36" from the hinge. This applies over 600 pounds of torque to the hinges.

Our door swings without binding!
